

FORMULATION AND MANIPULATION OF DATABASES OF ANALYTE AND
ASSOCIATED VALUES

Abstract of the Disclosure

5 The present invention relates to methods of formulating analyte data
databases, the databases themselves, and methods of manipulating the same. In one
aspect the present invention includes the formulation of analyte data points, derived
data, and data attributes databases comprising data points collected using an analyte
monitoring device capable of frequent monitoring of analyte concentrations or
10 amounts. Such data points may comprise acquired data (e.g., values corresponding to
analyte concentrations or amounts as measured by said analyte monitoring device).
These data points are then associated with one or more relevant data attributes. The
resulting databases may be manipulated to determine relationships among the
components of the database.
